Summary Scores

OVERALL	PERFORMANCE	ACCESSIBILITY	SEO HEALTH
72	96	45	50

Core Web Vitals — PerfLens Lab Measurement

Thresholds based on Google/web.dev guidance

Largest Contentful Paint (LCP)	1.85s [LAB] (GOOD)
Cumulative Layout Shift (CLS)	0.000 [LAB] (GOOD)
Interaction to Next Paint (INP)	Not measured (—)

Other Performance Metrics (Lab Diagnostics)

First Contentful Paint (FCP) Source: Navigation Timing API / Paint Timing API	1.85s [LAB] (NEEDS-IMPROVEMENT)
Total Blocking Time (TBT) Source: Measured in lab	0ms [LAB] (GOOD)
Time to First Byte (TTFB) Source: Navigation Timing API (Measured in lab)	0.56s [LAB] (GOOD)

Resource Payload Size Breakdown

Scripts (JS)	5.1 KB (1 files)
Stylesheets (CSS)	7.2 KB (1 files)
Images	0.4 KB (3 files)
Fonts	0 KB (0 files)

Performance Score Explainability & Audit Trail

Auditing Methodology: PerfLens Score (Lab Measurement)
Scoring Formula: Performance Score = (Normalized Metric Score × weight) / (Total Weights)
Calculated from normalized metric scores (0–100) using the configured metric weights.

Metric	Raw Value	Rating	Weight	Score	Contribution
Largest Contentful Paint	1.85s	GOOD	30%	93	+27.9
Interaction to Next Paint	N/A	UNRATED	0%	—	Excluded
Cumulative Layout Shift	0.000	GOOD	25%	100	+25
Total Blocking Time	0ms	GOOD	30%	100	+30
First Contentful Paint	1.85s	NEEDS-IMPROVEMENT	15%	87	+13.05
Time to First Byte	0.56s	GOOD	0%	93	+0

Authoritative Performance Score: 96 / 100

* TTFB Source: Measured in lab (Navigation Timing API)
* TBT Source: Measured in lab (Browser observer)

SEO & Rendered Metadata Audit

Document Title	"Hacker News" (11 chars)
Meta Description	Missing in rendered head
Canonical Link	Missing in rendered head
Robots Directives	index, follow (default)
robots.txt Probe	Status: verified_exists
sitemap.xml Probe	Status: missing
Primary H1 Heading	No H1 found
Heading Hierarchy	Sequential (No skipped levels)
Structured Data	0 valid schemas found (None)
OpenGraph Social	0% complete

Actionable Optimization Recommendations

MEDIUM • SEO

EVIDENCE: VERIFIED

1. Provide a meta description for search engine result snippets

What Is Wrong: No meta description was found in the rendered document head.

Evidence Found: Element: meta[name="description"], Observed: No <meta name="description"> detected in rendered DOM

Why It Matters: Your page does not currently provide a description specifically written for search-result snippets. Search engines may generate their own snippet from the page content. Approximately 120–160 characters is a useful practical guideline.

Fix Strategy: Declare one page-specific <meta name="description" content="..."> tag in the document <head> using the project's existing metadata architecture.

Validation Steps: Inspect the rendered page <head> and confirm exactly one <meta name="description"> exists. • Verify the content attribute provides an accurate, non-empty summary of the page.

AI Prompt: Ready to copy into Cursor / Antigravity / Claude Code via web dashboard.

HIGH • SEO

EVIDENCE: VERIFIED

2. Structure the page with a primary H1 heading

What Is Wrong: No <h1> element was found in the rendered document.

Evidence Found: Element: h1, Observed: 0 <h1> elements found in rendered DOM

Why It Matters: Search engines and screen readers use the H1 heading to identify the primary subject of the page.

Fix Strategy: Include a descriptive <h1> element in the page template to serve as the document headline.

Validation Steps: Inspect the rendered page and confirm an <h1> element exists. • Verify the <h1> contains descriptive text identifying the main topic of the page.

AI Prompt: Ready to copy into Cursor / Antigravity / Claude Code via web dashboard.

MEDIUM • PERFORMANCE

EVIDENCE: VERIFIED

3. Minify CSS stylesheets to reduce weight

What Is Wrong: 1 unminified stylesheet(s) detected with 1 KB potential reduction

Evidence Found: Unminified stylesheet: https://news.ycombinator.com/news.css?1tF8l2e7s6Rn5wBtSfGc (7.2 KB, Minified: false)

Why It Matters: Reduces stylesheet transfer sizes over the network.

Fix Strategy: Minify production CSS using clean-css, cssnano, or esbuild during compilation.

MEDIUM • PERFORMANCE

EVIDENCE: VERIFIED

4. Implement lazy loading for below-the-fold images

What Is Wrong: 2 below-the-fold image(s) loaded synchronously without loading="lazy"

Evidence Found: 2 img element(s) detected without loading="lazy" attribute

Why It Matters: Relieves initial network contention by deferring image requests outside the viewport.

Fix Strategy: Add loading="lazy" attribute to all 2 images that appear below the viewport fold.

MEDIUM • SEO

EVIDENCE: VERIFIED

5. Provide a valid canonical URL link tag

What Is Wrong: No <link rel="canonical"> element was found in the rendered document head.

Evidence Found: Element: link[rel="canonical"], Observed: No <link rel="canonical"> element was found in the rendered document head.

Why It Matters: A canonical URL tells search engines which URL should be treated as the preferred version when equivalent URLs exist.

Fix Strategy: Add the page's intended canonical URL using the project's existing SEO configuration. Determine the authoritative URL from the project's actual routing and domain configuration. Verify the authoritative URL before deployment.

Validation Steps: Inspect the rendered page <head> and confirm exactly one <link rel="canonical"> exists. • Verify the href is an absolute URL and matches the authoritative URL for the page.

AI Prompt: Ready to copy into Cursor / Antigravity / Claude Code via web dashboard.

6. Add descriptive alt attributes to image tags

What Is Wrong: 3 image tag(s) lack alternative text descriptions in the rendered DOM

Evidence Found: 3 tag(s) without valid alt attribute identified in DOM

Why It Matters: Enables screen readers to describe visual content to visually impaired users.

Fix Strategy: Provide descriptive alt="..." text descriptions for all image tags (affecting ~3 images) or empty alt="" for purely decorative graphics.

LOW • SEO

EVIDENCE: VERIFIED

7. Provide essential Open Graph metadata for social sharing

What Is Wrong: The page is missing essential Open Graph social sharing tags: og:title, og:description, og:image, og:url, og:type.

Evidence Found: Element: meta[property^="og:"], Observed: Missing tags: og:title, og:description, og:image, og:url, og:type (0% coverage)

Why It Matters: When users share your page link on social platforms or messaging apps, missing Open Graph tags result in blank previews without an image, title, or description, significantly reducing engagement.

Fix Strategy: Declare <meta property="og:title">, <meta property="og:description">, <meta property="og:image">, and <meta property="og:url"> in the document <head>.

Validation Steps: Inspect the rendered page <head> and verify og:title, og:description, og:image, and og:url are present. • Verify og:image points to a valid absolute image URL (minimum 1200x630px recommended).

AI Prompt: Ready to copy into Cursor / Antigravity / Claude Code via web dashboard.

LOW • SEO

EVIDENCE: VERIFIED

8. Provide Twitter Card metadata for X / Twitter link previews

What Is Wrong: The page is missing Twitter Card tags: twitter:card, twitter:title, twitter:description, twitter:image.

Evidence Found: Element: meta[name^="twitter:"], Observed: Missing tags: twitter:card, twitter:title, twitter:description, twitter:image (0% coverage)

Why It Matters: Without twitter:card metadata, tweets linking to your website will render as plain text links instead of rich visual media preview cards.

Fix Strategy: Declare twitter:card, twitter:title, twitter:description, and twitter:image in document <head>.

Validation Steps: Inspect the rendered page <head> and confirm twitter:card is declared. • Confirm twitter:title, twitter:description, and twitter:image are present.

AI Prompt: Ready to copy into Cursor / Antigravity / Claude Code via web dashboard.
